

Invest in environmental innovations Credit Suisse (Lux) Environmental Impact Equity Fund

Belgium: for professional clients only

Luxembourg: for retail and professional clients

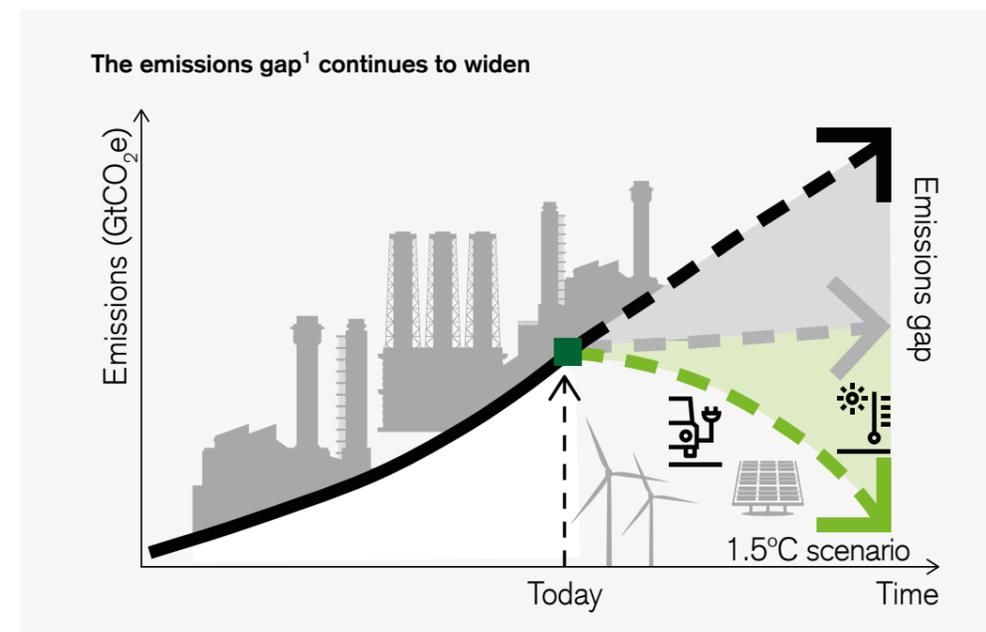

This is a Marketing Material.

For information purposes only, this presentation should not be used as a basis for investment decision.

Powering positive environmental change

Human ingenuity knows no limits. New and exciting solutions that tackle the most pressing environmental challenges are emerging every day. Some of the companies delivering those solutions offer much more than mere sustainability policies: their products, services, and technologies aim to make a positive impact on the environment.

The Credit Suisse (Lux) Environmental Impact Fund provides clients with the opportunity to invest in pure-play companies that develop or finance solutions to the most pressing environmental and climate issues.

Why environmental impact?

In recent years, investors and society have come to realize the need to place sustainability at the core of economic and societal development. This long-term trend opens up new opportunities for technologies addressing the most pressing environmental issues.

From smart buildings and advanced insulation, which increase energy efficiency, to electric vehicles, which help decarbonize the transportation sector, technologies needed to enable sustainability are already transforming the value chain of entire industries. In many areas, e.g. electric vehicles, we are approaching cost parity.

Today, technologies addressing sustainability challenges – such as home energy storage solutions or electric vehicles – are being adopted more and more widely, displacing incumbent solutions. We expect this trend to continue across numerous industries, laying the foundations for long-term growth.

Why now?

We are at a tipping point, and the time is ripe for change. The rate at which both the private and public sectors are allocating resources to initiatives promising a positive environmental impact is accelerating rapidly – by one estimate, the value of the market for solutions to combat climate change alone may reach USD 26 trillion between 2020 and 2030.² The need for solutions to challenges facing the planet is opening new markets and expanding existing ones, offering a range of profitable opportunities for active managers who successfully combine investment expertise with an impact and sustainability focus.

As a global financial services provider, we leverage expertise in sustainable investing, investment capabilities, insights, and resources to deliver investable solutions for our clients. Our **Credit Suisse (Lux) Environmental Impact Equity Fund** enables investors to steer capital toward companies whose products, services, and technologies have the potential to accelerate a positive environmental transition while aiming to generate financial returns.

¹ The difference between the emissions levels that countries have pledged to achieve under international agreements and the levels consistent with limiting global warming to well below 2°C.

² World Economic Forum. 2018. Fighting climate change could add USD 26 trillion to the global economy by 2030.

“
The transition from fossil fuels to clean technologies will transform the global economy in the 21st century in a more profound way than imagined today.

Holger Frey
Senior portfolio manager

How do we invest?

The mission statement of the Credit Suisse (Lux) Environmental Impact Equity Fund is to “invest in environmental innovations”, therefore executing on that promise while seeking attractive returns is our highest priority.

To efficiently address a wide range of environmental challenges, we have classified them into four subthemes aligned with specific United Nations Sustainable Development Goals (UN SDGs): sustainable infrastructure, resources, waste mitigation, and carbon reduction technologies.

Given our unique approach, focusing on compa-

nies that provide specific solutions to environmental challenges, the portfolio is biased toward small- and mid-cap enterprises. Since firms of this size are not often found in conventional portfolios, this enables us to tap into sources of return that have not previously been accessed, thus broadening diversification.

The fund incorporates ESG³ criteria in its investment process. Active ownership – i.e. proxy voting and engagement – helps us advance our goals in the interests of our investors while also supporting the industry in its endeavors to contribute to a more sustainable world economy.

Our investment subthemes are aligned with specific UN SDGs

³ ESG stands for environmental (E), social (S), and governance (G). More information about sustainable investing is available at credit-suisse.com/am/esg. For further information about our Sustainable Investing Policy, please visit credit-suisse.com/esg.

Our investment process

Global equity universe
~ 40,000
listed companies worldwide

ESG-screened and liquid⁴ universe
~ 25,000
stocks

Broad universe
~ 500
stocks with significant revenue exposure to the theme

Pure-play universe
~ 250
pure-play stocks

Portfolio construction
~ 40-60
stocks

Stock selection is based on five steps:

1 We analyze the global listed equity market in search of companies that have an appropriate strategy and a suitable product portfolio to enable them to drive positive environmental change.

2 We apply minimum liquidity requirements and exclude companies based on norms, values, and severe controversies to ensure alignment with our Sustainable Investment Framework.

3 After a careful analysis, supported by internal and external research, discussions with analysts, and regular company visits, the broad universe of around 500 stocks is quantitatively and qualitatively screened.

4 When defining the investable universe of around 250 stocks, we apply the pure-play criterion that at least 50% of the companies' revenues should be related to the environmental impact theme.

5 A concentrated, high-conviction portfolio of typically 40 to 60 stocks is built, based on a bottom-up approach driven by fundamental research. Material ESG factors are identified and incorporated into security analysis and are periodically monitored and reviewed.

⁴ Excluding stocks with a market capitalization below USD 150 mn (source: Bloomberg).

This product undertakes investments that are dedicated to addressing the United Nations Sustainable Development Goals (e.g. education or clean energy) through a thematic approach.

Information about the product's investment objectives, risks, charges, and expenses, as well as more complete information about the product, is provided in the prospectus (or relevant offering document), which should be read carefully before investing. The list of share classes is meant for illustrative purposes only. Please note that not all share classes may be available in your jurisdiction. Depending on your jurisdiction, additional share classes may also be available. Please contact your relationship manager for more information.

Risks

- Investors may lose part or all of their investment in this product.
- Political developments concerning environmental regulations may have a significant impact on the underlying investable universe.
- Exposure to small- and mid-cap companies may result in elevated short-term volatility and may carry liquidity risk.
- An elevated concentration on specific sectors or industry dynamics may fall out of investor favor at certain points in time.
- Heightened exposure to less-regulated sectors and to businesses such as renewable resources that are not yet well established could cause temporary volatility and may carry liquidity risk.
- It is possible that the data supplied by the ESG data providers may be incorrect, unavailable, or not very recently updated, so there may be a data time lag.
